A: From this: The product has been discontinued. For license and support, please contact your Sceigen Account Manager. They discontinued it. The main reason is lack of updates for that software. If you own a license for that product you need to contact your CADlink Account Manager, and they will allow you to install the license or if it was paid then they will authorize you to access. Otherwise you can download a free license and use that. Q: Show all possible combinations of two lists where order is important I have two lists of strings like this List first = new List { "A", "B", "C", "D" }; List second = new List { "1", "2", "3", "4" }; I need to show all the possible combinations where order is important and the order must be respected for each item in the list first. For Example : Combinations: "B 1 2" "A 1 2" "C 1 2" "D 1 2" "A 1 3" "B 1 3" "C 1 3

Category:CommodoresRandomized controlled trial of a structured body counter to measure free-living energy expenditure. A structured whole-body counter (Structured Body Counter-SB) was evaluated in adults as compared with direct measures of oxygen consumption (VO2) and energy expenditure (EE) over 24 h, in a controlled laboratory setting. The SB is composed of an electronic digital scale, a water-proofed enclosure, and an oxygen analyzer with a built-in fan and heat-insulated flow and sampling probe. It measures oxygen consumption and weight in the resting state and in four functional states (walking, standing, cycling, and running) based on the difference in body weight between the SB and the subject. By comparing the weight difference, energy expenditure can be calculated. In a randomized controlled trial, 26 women and nine men (21-35 yr) wore the SB and had direct measures of VO2 and EE. The overall mean difference between the SB and direct measures of VO2 was -0.3 +/- 2.9 L x min(-1) (95% CI = -0.7 to 0.1 2d92ce491b
