ATTENTION: For the registered users All tools are working, the downloading speed is amazing and you will be informed with every progress. I will also guide you about the suspicious links. Q: Spring/Hibernate/Maven: Unable to get applicationContext.xml when calling postConstruct on an entity I am currently trying to do some integration tests on a Hibernate/Spring/Maven project. I need to get the applicationContext.xml from the classpath to make the DB connection. I am using Spring-Test. I am able to get the files from the classpath using FileUtils, but when I create an instance of a class from that class and call postConstruct on it, I get a NullPointerException. I am not sure how to solve this problem. I'd appreciate it if anyone could help. The entity I need to access the applicationContext.xml from: public class User { private String username; private String password; private String email; private boolean active; public void setUsername(String username) { this.username = username; } public String getUsername() { return this.username; } public void setPassword(String password) { this.password = password; } public String getPassword() { return this.password; } public void setEmail(String email) { this.email = email; } public String getEmail() { return this.email; } public void setActive(boolean active) 2d92ce491b
