Learn how to download and install Service Pack 2 for Windows Vista to ensure your computer gets important updates and improvements to Windows. Category:Microsoft Windows Category:Windows Vista Category:Windows ServerQ: AWS node.js: How to get the attributes of CloudWatch (AWS) metrics We want to create a website that gets CloudWatch metrics from our AWS instance. There is no documentation on how to get the AWS-CloudWatch attributes, especially not for node.js. Some more context: We use Google Closure to generate a single js file that consists out of many. We want to look into the metrics from this

instance (by using express). We already created the instances, but we want to extend our own interface. There is no straight forward api, that is available. Do you have any hints on how to do this? A: I haven't tried this myself, but from the docs it looks like you can read data from CloudWatch using the aws sdk for javascript. This should let you read all of the attributes that the services expose using the metrics API. The official docs also give an example of using the CloudWatch API directly to read data from CloudWatch. Q: Embedded Jetty 7 seems to stop in its tracks when I try to stop it I'm trying to embed Jetty 7.0.2 in a Scala program to run a

simple Hello World webapp. It seems to work fine when I run the embedded Jetty server from the Scala program, but when I stop it I get this exception: `java.lang.NoClassDefFoundError: org.eclipse.jetty.util.log.Logger` at `java.lang.Class.getDeclaredFields0(Native Method)` at `java.lang.Class.privateGetDeclaredFields(Class.java:2317)` at `java.lang.Class.getDeclaredFields(Class.java:1671)` at `java.lang.Class.getDeclaredFields(Class.java:1671)` at `org.eclipse.jetty.server.handler.HandlerList.getHandlerField(HandlerList.java:89)` at `org.eclipse.jetty.server.handler.HandlerList`
