No or faulty keyboard? You should consider that you are missing the functionality of your keyboard. When you don't use your keyboard for a while, the keys begin to weaken, which can lead to a malfunction. Even a small physical impact on your computer can cause serious damage. If you have noticed that you are typing less quickly than usual, or you can't type any longer, then it is time for a service. How do you know if your keyboard needs to be repaired? This is a step-by-step guide to help you find out if your keyboard needs repair. Backspace: Your keyboard is working fine. This key is used for deleting characters. However, if you accidentally touch the backspace key, it will also delete the characters after the highlighted text. Enter: Use the Enter key to start a new line. If you touch the Enter key more often, you should be careful. A common mistake is typing your email address or password when you're not ready to send them. Pause: Your keyboard is malfunctioning. You need to turn off the keyboard to access the F7 key. In many models, you need to press and hold the Pause key for three seconds to turn off the keyboard. Space bar: The Space bar lets you add or delete space in a text. If you are typing a lot of data, it is important that you touch the Space bar when you are done with typing. Tab: A Tab key is the default shortcut to navigate between web browsers. If you are using a laptop, a Tab key may work as a shortcut for other navigation tools. A few keys: Your keyboard is malfunctioning. To switch between programs, you need to press the Function keys F1, F2, F3, F4, F5, and F6. You can also use the F8 key to go to the Task Manager. Pressing and holding a key: Touch the F8 key on your keyboard and hold it for three seconds. This will display the Task Manager. You can use this key to disable or enable your audio and video devices. You can also use the F9 key to shut down or restart your computer. What else can you do to fix your keyboard? Here are some things to check out: The "louder the better" switch: If you notice that there is a rattling sound when you press the F10 key, it is most likely that your keyboard needs to be replaced
