

Screenshots About This Software Reviews What's new in v2.25.0.7 - EPC WIS In addition to the earlier patch, I have also found a way to add the answer to the "SecurityCode" fields of the DTD. This of course only makes a difference if you are subscribed to the EPC WIS service. This fix has been added. The UI got updated with the new addition to the answer to "SecurityCode". Enjoy! Please help us find more software by adding your reviews of this software. *Lifetime Customer* This software is very easy to use and fits my needs exactly. I will use your software again and recommend it to my friends. Regards Stephen Sep 14, 2017 I am having problem with the update from v2.25.0.6 to v2.25.0.7. The software does not launch anymore. The present invention relates to a polymer foam having a high degree of isotropy and high rigidity, and is useful as a heat insulating material or a construction material. In general, polymer foam has a three-dimensional cell structure and exhibits high insulation property and excellent flexibility. Therefore, it is expected to be used as a heat insulating material or a construction material. A method of producing conventional

polymer foam includes a method of continuously injecting a thermosetting foaming agent as a blowing agent and a hydrophilic substance into a mold having a given shape and then subjecting the mixture to a polymerization reaction. In this method, the mold is expanded by heat or compressed by a pressure, and the foaming agent and the hydrophilic substance are added at an appropriate period, to thereby produce a foam. For example, the applicant of the present application has proposed a method of adding a blowing agent such as carbon dioxide to a polymer composition containing a hydrophilic substance, thereby producing a cell-structured foam. However, the cell structure of the polymer foam is highly anisotropic. As a result, the foam has low rigidity and no sufficient heat insulating property.

In order to solve the above problems, for example, the applicant of the present application has proposed a method of producing a cell-structured foam using a material containing a blowing agent and having a viscosity of not less than 1.0×10^5
