The fact that the temperature has been increased to the order of the Planck scale sets the upper limit for the scale factor. Moreover, the increase in the temperature does not affect the solution because the scale factor at the time of the Planck epoch is already close to 1. In

summary, the modification of the topological pressure has been explained as a result of the temperature increase of the universe. We can confirm that the topological pressure increases as the scale factor increases if the universe has the special properties as mentioned.
