The French way of wine is different from other. What is important to us is not the quantity but the quality of wine. We are not into volume wines. We love being with our wines. Be with them, talk to them and have fun with them. The history of wine is very old. It started in the Near East and spread all over the Mediterranean world. Our family history is directly linked with the history of wine. Oenology is an art form. It is not a science. The oenologist or winemaker is an artist. We like that art. We want to enjoy the beauty of wine and even more the communication between the wines and the people that drink them. The taste of wine is like a feeling in the mouth. It is the excitement and the balance between concentration and relaxation of the senses. It is the background and the body of the wine. Our experience in wine has been a great experience. We love the wine. The vineyards are beautiful and the wine is also very nice.Q: Reasons for X server (Xorg) to eat CPU I'm experiencing some strange behavior with Xorg on my Linux (RHEL 5.5, Xorg 7.2.0) system. Xorg takes up almost all available CPU and the system becomes unusable. The symptoms: After the system boots and

Kodandarami ReddyQ: Create MySQL Database in Java I am trying to create a MySQL database in Java using the code below. It's supposed to connect to the database and insert new data. For some reason, the database does not get created. When I use the correct information to create the database in MySQL workbench, it works. I just cannot figure out what is wrong with the code. try{
Class.forName("com.mysql.jdbc.Driver"); System.out.println("Can connect"); Connection conn = DriverManager.getConnection("jdbc:mysql://localhost:3306/jython?autoReconnect=true&useUnicode=true&useJDBCCompliantTimezoneShift=true&useLegacyDatetimeCode=false&useSSL=false", "root", "1234"); String sqlInsert = "INSERT INTO items (name, description) VALUES ('" + name + "', '" + description + "')"; PreparedStatement preparedStatement = conn.prepareStatement(sqlInsert); preparedStatement.executeUpdate(); System.out.println("Success"); } catch (Exception e) { System.out.println("Error: " + e.getMessage()); } A: You need to call the.close() method after connection. Here is sample code: try{
Class.forName("com.mysql.jdbc.Driver"); System.out.println("Can connect"); Connection conn = DriverManager.getConnection("jdbc:mysql://localhost:3306/jython?autoReconnect=true&useUnicode=true&useJDBCCompliantTimezoneShift=true&useLe
