Find out more about Nokia mobile phones from. NaviFirm Plus Download. Nokia NaviFirm Plus is an application that allows you to download firmwares from. Abiotic stress responses of potato tubers (*Solanum tuberosum* L. cv. Desiree) under acidic conditions induced by Pb. Pb has been shown to affect plant growth, development and biotic and abiotic stress responses. In this study, the effect of Pb on a high-yielding variety of potato (*Solanum tuberosum* cv. Desiree) under acidic conditions induced by Pb was investigated. Pb was applied to the medium at a level of 200 µg/mL (12.3 µM). We showed that Pb induced large differences in the nutrient composition of potato tubers in a short time (i.e., 8 days). After Pb exposure, potato tubers treated with 0.5, 1.5, and 2.5 mM Pb in acidic conditions exhibited increased lipid peroxidation, protein oxidation, and enhanced ascorbate peroxidase activity. High Pb concentration (3.0 mM) and acidic conditions resulted in significant decrease in phenylalanine ammonia lyase, peroxidase, and catalase activity in potato tubers. Moreover, superoxide dismutase activity was decreased by Pb, particularly at lower concentrations. Pb increased H₂O₂ and malondialde
