Sony's Vita has released a fairly huge amount of software so far in the year, as it was earlier revealed that the Vita is poised to eventually become Sony's third leading console in terms of games sold. With that in mind, here are a few of the best Vita games released in the year so far and some of the

The

purpose of this study was to examine the metabolism of glucose in different incubation media. The metabolism of glucose in the re-esterification process was studied in vitro in the isolated bovine jejunum. A number of metabolic parameters as well as the re-esterification rate in the isolated jejunum were measured using a Clark-type electrode, the glucose concentration in the perfusate being determined by enzymatic method. It has been found out that the total volume of the medium, increasing from 0.5 to 1.0 ml, is responsible for the increase of both the re-esterification rate and the glucose

uptake from the enteric circulation (downstream). At the level of 10 ml and higher (2.0 ml) the intravascular glucose concentration increases, whereas the enteric glucose uptake decreases. The re-esterification rate in the isolated jejunum decreases in the direction of the intravascular glucose concentration. It has been proved that the glycemic curve measured in vitro under the conditions used in this experiment reflects the real metabolic situation in the jejunum.
