Uninstall Tool

Uninstall Tool is a professional software application whose purpose is to help you uninstall programs from your system and delete registry entries and other remnants. Additionally, the tool includes a startup manager that allows you to disable or enable programs that run at Windows startup. Uninstall Tool is a professional software application whose purpose is to help you uninstall programs from your system and delete registry entries and other remnants. Additionally, the tool includes a startup manager that allows you to disable or enable programs that run at Windows startup. Smooth installation and several tweaks Installing the software takes place in no time and you may select the components that you want to deploy on the system. You

can opt for the "Install and Trace" feature which helps you monitor all entries added to your system by a new installed utility. Plus, you can place Uninstall Tool's icon in Windows Control Panel. User-friendly interface The program automatically builds up a list with all utilities installed on your system and provides information about each one, such as name, size and installation date. The list can be refreshed with a single click and exported to HTML file format. What's more, you may perform search operations for quickly identifying an app in the list, sort items by system or hidden files, open up the Windows Registry Editor for viewing info about the entries for a particular tool, access the installation folder, as well as perform searches on Google about the desired software. Different uninstallation modes Uninstall Tool gives you the possibility to works with two different modes for getting rid of software from your computer. You can uninstall the selected program, scan the computer for registry entries and leftover files, as well as delete all the detected traces. The second mode is built specifically for helping you identify system files and registry items belonging to a certain tool. It proves to be particularly useful especially when you need to delete obsolete or invalid entries, which couldn't be normally

removed from the system. Monitoring options The "Install and Trace" mode helps you keep an eye on the changes that are made to your system when installing new software. You can view all entries left behind for each monitored utility. Startup manager A smart feature bundled in the package empowers you to check out the programs that run automatically at Windows startup, view current user registry key and details about the utility's name, status, source and company, enable or disable them, as well as add a new app to startup. What's New in the Uninstall Tool?

Advertisements Automatically clean unused programs
Antivirus program can also be used for cleaning up
unneeded programs. Information on how to disable
Uninstaller via Startup Manager. Description: Using
Startup Manager, you can manage system programs that
start-up automatically. Set program to start or not start
up. Set program to start with Windows or not start up
with Windows. Uninstaller is not affected. Download
Uninstaller.exe from download link below and install this
software. Get the full version of Uninstaller and register
it to get the uninstall history. Author: License:
Customizable uninstallation wizard Uninstaller is really

useful when it comes to deleting programs you don't use anymore. For instance, you can add your favorite games to the "To be removed" list and configure how uninstall steps should proceed. Remove the items from the list when they are not needed anymore. To detect programs you no longer use, you can make some tweaks in the settings of the uninstaller and create a list with software you use often. You can even add application packages to the list manually. Restore or restore all registry entries. Scan your computer and remove old and invalid registry entries. Uninstaller includes a special wizard for efficiently handling all uninstallations. All you need to do is configure the program, create a list with programs you don't want to remove and click the "Start" button. Uninstaller includes a special "Search & Clean" feature which helps you find traces of the installed software. To search for the installed program, you need to enter its name in the search box. If you have an exact name, you can get the tool to scan the system and remove the installed program. Remove entries from the list and enable or disable uninstallation wizard for each item. You can also set the program to start on Windows startup, view the startup programs, add a new entry to startup or disable a startup item. Information on how to

disable Uninstaller via Startup Manager. Description: Designed to remove the programs you don't need anymore. Description: Automatically clean unused programs Antivirus program can also be used for cleaning up unneeded programs. Information on how to disable Uninstaller via Startup Manager. Description: using Startup Manager, you can manage system programs that start-up automatically. Set program to start or not start up. Set program to start with Windows or not start up with Windows. Uninstaller is not affected. Download Uninstaller.exe from download link below and install this software. Get the full version of Uninstaller and register it
