The program's main intent is to quickly backup the information in NTFS partitions, but it can do so with any type of partition (from FAT to ZFS). It uses hard links to reduce the chance of directory deletion (for example, to restore the lost directory), while using short file names (SFN) and long file names (LFN). The program uses a multi-threaded algorithm to speed up the backup. The program offers the possibility of a scheduled backup and to perform a backup with user interaction. The program has a built-in utility for backup-restore, which comes with many uses. The program has a GUI for easy user interaction and has a color scheme for Windows XP and 7. CSBackup is a FREE and open source backup software written in C# as a Console application. It was originally released as a Python program on November 20th, 2010, with the intention of eventually converting it into a full C# application. It is based on the work of bacula. CSBackup features a user interface similar to the bacula frontend and is command line driven. CSBackup User Guide: I'm looking for a Computer Technician who is able to fix my MacBook Pro. I just have to tell him what to fix! Same goes for an iPhone / iPad / iPod fix. Same case but this is for my Ipad and (3) iPods. Kindly supply a quote for the project. Thanks for your time. A: Takes some google searching but a good place to start is with the links on the 'System Repair' thread on SF. He is certainly smart enough to know all this stuff for free - so if you are looking for a "working" quote I would suggest trying to find out who is in a better position to 'fix' your Mac than he and let him know you're willing to pay money instead. A: A good place to start looking to see how much time you might spend trying to fix it on your own is watching a youtube video of the issue. You'll be surprised at how much you can see as you go through it. Some other reference areas are these two sites and Beyond that here are a couple of sites that might be helpful. Q: Xcode error "xcodebuild: error: '\$(SDKROOT)/usr/lib/libSystem.B.dylib' is damaged and cannot be opened" I am getting following error when I am trying to open xcode. xcodebuild: error: '\$(SDKROOT)/usr/lib/libSystem.B.dylib'
