I'm a Scala newbie and I'm trying to create a new data frame inside of the Spark shell, but I seem unable to do it. I would like to create a new data frame where all of the items that start with "X" are selected from an array of items. I tried using the select method of the spark session: scala> val newDataFrame = spark.session.apply(Seq(someKey)) newDataFrame: org.apache.spark.sql.DataFrame = [_1: string] val filter = newDataFrame.select(selectStr.mkString(",")).as("someData") filter: org.apache.spark.sql.DataFrame = [someData: string] scala> filter.show +-----+ | someData | +-----+ | X1X | X2X | X3X | X4X | X5X | +-----+ But when I try to select the data from that new data frame, there is no data returned. scala> filter.select('X1X:bool, 'X2X:string, 'X3X:float, 'X4X:string, 'X5X:float).show +-----+ | someData | X1X | X2X | X3X | X1
