The tool offers simplified management of VMware virtual infrastructure, including VMware vSphere 6.5, along with the vSphere integrated Resource Scheduler 6.5. OptiDisk vSphere offers support for ReFS and Cluster Shared Volumes, and can reduce I/O throughput and I/O latency and maintain optimal resource utilization. The software also delivers automatic optimization of virtual infrastructure in

real time, thus eliminating I/O bottlenecks, and this results in improved server virtualization performance. During optimization, the software maintains the performance of virtual machines on the host, while also eliminating resource contention, thus ensuring high resource availability. The application also comes with features such as VMFS5/NFS Storage Quality of Service. Courtesy of integrated OptiWrite technology, the software can prevent fragmentation on drives before it occurs, which ensures that systems won't slow down. OptiWrite has been designed to detect when Windows fragments files and redirects I/O to stop that, which maintains system performance at a high level. The application provides support for vMotion

and Migration, and comes with full support for clustered storage, which can eliminate I/O bottlenecks and improve performance. OptiDisk vSphere can deliver optimization for physical hosts, and guests, while also improving system performance. The software uses optional optimizations for thin provisioned volumes, thus maintaining I/O throughput and I/O latency. OptiDisk vSphere's Smart Cache technology also ensures optimal access to drives with SSDs and disk arrays. OptiDisk vSphere delivers powerful performance enhancements for VMware virtual storage and physical storage systems. The software also supports IOPS and will increase IOP performance and I/O throughput. OptiDisk vSphere works with ReFS, Cluster Shared

Volumes, and has integrated I/O prioritization.
