Application programming interfaces (APIs) AutoCAD has two types of APIs. A user-visible API is a graphical user interface (GUI) based API. The user interacts with AutoCAD by means of AutoCAD's graphical user interface. This interface is visible on the screen. An API that is not visible on the screen, but rather implemented in the AutoCAD application software. This is used to allow third-party software to add AutoCAD functionality to their own programs. The user visible API has an autocad.dll library (C# and Java examples) for creating a C# or Java application that uses the AutoCAD API. This is provided to the user of the AutoCAD software. The non-visible API has a System.AutoCAD.dll library (C# and Java examples) that third-party developers use to add Autodesk functionality to their own programs. The non-visible API is used to develop plugins. The user of the AutoCAD software has no visibility of the API used by third-party developers. AutoCAD's C++ programming language (called ACAD ObjectARX) is derived from ObjectARX, an object-oriented programming language. ObjectARX is a C++ class library that supports the development of custom AutoCAD applications that add new functionality to the application. ObjectARX is the programming language that AutoCAD 2017 uses to make its own custom programming language and API. Called Runtime Functions (CRF), AutoCAD uses its C++ API to create dynamic libraries or shared objects which are then loaded into AutoCAD. The C++ interface allows making a function call via an Interpreter. There are a number of programming languages which use the AutoCAD API. Examples are C#, Java, Delphi, Visual Basic and C++. These languages are used to create custom AutoCAD add-on applications. The user interface is independent of the programming language. The AutoCAD.NET programming language is written in Visual C#, an interpreted, type-safe object-oriented language that enables .NET developers to create powerful software applications. Visual C# is compiled into .NET programs that are used to create custom .NET applications. Visual C# is also used to create the Add-in engine for AutoCAD. AutoCAD's XML based programming language is called Visual LISP. a1d647c40b
