
Smart Date Picker ASP.NET Web Control Free Download For PC

It is a multi-functional and extremely easy to use component that will reduce the developing time significantly. All you'll need is just to add the Smart date picker and it will work. No configuration is needed. Download our free trial (never expire) ASP.NET calendar Web Control and implement a fully featured date picker into your web application within minutes, or less. The Smart Date Picker is a free extension for the ASP.NET Calendar which supports an advanced, intelligent and customizable date picker which is driven by a server-side algorithm, using one single SQL query and returns the data to be used by the control. This control can be used on all the pages that display the Calendar, for example: Day, Month, Year, Time, Month-Day. Available in 13 languages, the Smart Date Picker has a very sophisticated formatting mechanism that enables the user to type unformatted free text date which will be formatted to the corrected right date. In addition, it can be used to display dates of any other calendar type, such as Week or Agenda. Also, you can choose the currently selected day using the built-in color- and style-based CSS effects. With this component, the user can easily customize the date formatting or choose among all the available date formats supported by the data provider. Moreover, the component can be used for many other scenarios and this is just one of the many things that make the Smart Date Picker so powerful. Any date can be selected or validated, and can be returned as a fully formatted date. The Smart Date Picker also supports a variety of date formats like d/m/Y, d/M/Y, m/d/Y,

m/d/Y H:i:s, d-M-Y, d/m/Y, d/M/Y, d/m/Y H:i, Y-m-d, Y-d-M, d-M-Y H:i:s, m/d/Y H:i:s. The control supports features like: • Globalization support - full support for globalization, • Special dates - supports holidays, weekends, public holidays, • Footer Text free, • Many other features • Functions to enable/disable certain features and to show the current value of a date format, • Support for many date formats: Format: dd/mm/yyyy

Smart Date Picker ASP.NET Web Control Crack+ Keygen For (LifeTime)

Smart date picker is a strong and fully configurable ASP.NET calendar program that comes with multiple convenient features. For the end-user, Smart date picker is easy to use, and for the developer it is easy to implement. In the other hand, its smart features like Globalization, Special Dates, Min/max date and Footer free text give the developer powerful tools to create complex application. The Smart Date Picker has a very sophisticated formatting mechanism that enables the user to type unformatted free text date which will be formatted to the corrected right date. The developer can also use the Advanced JavaScript API and Event Model in order to build Complex and highly performance client side applications. Download our free trial (never expire) ASP.NET calendar Web Control and implement a fully featured date picker into your web application within minutes, or less. Smart date picker is a rich and fast component for ASP.NET Web development. Our vision is to build smart components that will reduce the developing time significantly. All you'll need is just to add the Smart date picker

and it will work. No configuration is needed. In the other hand, the date picker is plenty of properties and methods that give you all the flexibility you need for developing the most complex modules. Support to show/hide the event grid Support to change the event
grid color Support to change the event grid border color Support to
change the color of the event grid line Support to use the line

What's New in the?

An ASP.NET calendar control which comes with more than 20 useful functions. By using ASP.NET Calendar Control, you'll have the ability to create DatePicker at runtime and specify the calendar parameters such as DisplayDate. Other features such as Interactive Calendar, Page Break before/after, Range Sliders, Date Range,... are also available. ASP.NET Calendar Control is also built with the best UI framework Microsoft ASP.NET AJAX, and provides its functionality by client-side scripting such as JavaScript. This makes it possible to easily integrate with other AJAX controls. In addition, it supports the client-side validation of the input date format. * Smart date picker can be used as client-side datepicker for simple date editing, or as a server-side control for more advanced date picker scenarios. * The date picker supports Multi-language user interfaces. For multi-language user interfaces, the date picker can be specified for the selected culture. The current selected culture will be used for all fields

except for the date picker itself. The current culture will be used for the date picker itself if you did not select a specific culture on the page. For example, if you have two cultures selected, if your current culture is US and you select the culture for the current selected culture, then your date picker will display the dates for the US culture. * The date picker supports multiple calendars, for example, you can use the Gregorian calendar and the Chinese lunar calendar for the same date. The calendar name can be selected in the control's property Page.Multicalendar. * Interactive Calendar and Calendar On Demand are two new features in the date picker. You can set the maximum date range that can be set to 1 year. The control allows you to choose the current date at the beginning of a date range. The calendar shows the date range on the page and you can click on the date range and the currently selected date will be shown. * The control also supports the date range with a selected date. You can allow a user to select a range for which the control will present the next and previous dates. * The Calendar support will be used in ASP.NET web application which uses the ASP.NET AJAX Framework to implement a client-side control that renders server controls at runtime. * The date picker has the ability to change the date format from client side. You can define the formatting rules in the page for each format. * The date picker supports a variety of date formats, including client-side date formats, custom date formats, and ISO-8601. * The date picker can be used in a MVC application. * Footer Free text. The user can specify free text in the footer of the page. If there is no input,

System Requirements:

Minimum: OS: Windows 7, 8, 8.1, 10 (32 or 64 bit) Windows 7, 8, 8.1, 10 (32 or 64 bit) Processor: 1GHz 1GHz RAM: 1 GB 1 GB Graphics: DirectX 9.0c compatible video card DirectX 9.0c compatible video card DirectX: Windows Software Development Kit (SDK) Windows Software Development Kit (SDK) Hard Drive: 3 GB available space 3 GB available space Sound Card: DirectX 9.0c
