Macro Recording AutoCAD allows users to record keyboard commands and mouse movements that can be triggered at a later time by a macro function. AutoCAD is compatible with third-party applications and add-ons that support macro recording, and with AutoCAD macros, users can record many commands into a macro recording that can be recalled and executed at any time by clicking the record button on the keyboard or mouse. The macro recording is saved in the AutoCAD drawing and can be recalled at any time. A few examples of macro commands are: AutoCAD to draw shapes, lines, circles, and arcs; AutoCAD to record a complex drawing command line by line; and AutoCAD to create drawings automatically based on templates or standard shapes. Macros can be created, recorded and executed by the same user, or by other users on the same or on other computers using a network. Macros are used to repeat an individual task more quickly than by navigating through menus and dialog boxes. Macros can also be used for complex repetitive tasks that are best performed with a series of steps. For example, a macro may be used to duplicate a drawing to an exact location on a sheet or in a folder. Drawing controls AutoCAD ships with some default drawing controls. Most of these are available in the toolbars. There are also a few drawing controls and gauges that come bundled with the application and do not appear on the user's toolbars. The toolbars are structured in tabs. Some of the drawing controls available are: 2D These are the tools found on the 2D tab: These drawing controls are found in the toolbars: 3D The 3D tab contains: 3D Align 3D Extrude 3D Offset 3D Rotate 3D scale 3D Solids 3D Trim 3D View/Fit 3D Weld The 3D tab contains: Docking panels The docking panels are used to place and arrange elements on the screen. The three main types of docking panels are: Drafting panels This is where blocks, layers, blocksets, dimensions, and so on are entered. This is a diagram of a drafting panel. Note Some of the items found in the docking panel are only available in certain views. Graphic window This is where images are inserted. Layout window 5b5f913d15

```

and also set the KeysVersion parameter to "12.1.1"

Quentin Tarantino Wins Again, this time a Landmark Award for Best Live Action Short The Academy Award-winning filmmaker, who celebrated the news with a tweet this afternoon, has won the Landmark Award for Best Live Action Short. In the prestigious Los Angeles filmmaking community, the Landmark Award is a special honor given to an independent short film and was established in 2003. "This is a fantastic honor, and a surprise to me as I'm such a giant fan of Landmark's past winners," says Tarantino. "On top of all that, it was made by the same team that won this year's Academy Award, and I am deeply proud of them for it." Tarantino's new award-winning film is Superluminal, a short directed by Jamie Babbit and starring Rachel Grunspan. "I am very excited to announce that my new short, Superluminal, has won the 2018 Landmark Award for Best Live Action Short," says Tarantino. "It's a great honor and a little surreal to know that my most personal film has been recognized by the L.A. independent filmmaking community." "We are deeply honored to have received this wonderful award for Superluminal," says writer-director Jamie Babbit. "We started the project over two years ago with the hope of honoring the power of sound and the transformative power of music. It is a profound honor to be recognized by the Landmark Award for our personal passion project." Tarantino's other award-winning, and recently released, films include Inglourious Basterds, Django Unchained, and The Hateful Eight. His upcoming film The Irishman will be released in December, starring Robert De Niro, Al Pacino

What's New In?

With Markup Import, an existing drawing can be imported into the software, allowing you to add comments and questions to the original design, and forward this to an external party for response. The external party can choose to return a response through the web or via a separate electronic file, which is then incorporated into your original drawing. This can be done via a browser, directly within AutoCAD, or with Markup Assist, a tool that can also convert comments and questions into editable text. (video: 1:29 min.) Markup Assist is a recently added feature to make your drawings accessible to people with different capabilities. It allows drawings to be sent to people who have different capabilities than the original author, such as a senior designer who is not comfortable with the technical details of the CAD application or a customer who may only be able to use the software in certain ways. Using the Markup Assistant dialog box, you can add comments and markups to drawings, then upload the edited files to your CAD software via the internet or USB memory stick. The comments and markups can be shared with other users by the original author or can be opened, edited, and shared by other users. (video: 1:25 min.) Raster Graphics Formats: CAD applications are now able to save and load raster graphics directly into a memory card or disk, making it easier to share raster images that are not used as hyperlinks. (video: 1:36 min.) PNG images can be saved directly to a memory card or disk, and will not be converted to a vector format during the save. When loaded, they will be displayed as they are originally created (see A Format for Internet Use). PDF: Now available on the Disc/USB/DVD memory stick, PDF files can be directly created, viewed, and edited on the same USB drive as other image types. (video: 1:45 min.) Autodesk added the ability to open, edit, and save PDF files directly from within the CAD software without the need to create a separate PDF file. You can open PDF files directly as they were originally created, then add, move, and edit the content. Save changes directly back to the PDF file without loss of content or conversion to another format. Vector Graphics Formats: The Portable Document Format (.PDF) is one of the most common ways for individuals and organizations to share CAD drawings on the Internet
