Also, the first version of Autodesk Design Review was released in 1997 and became popular for its user interface, which was subsequently used for Autodesk's BIM 360 product. History 1980s Autodesk "AutoCAD" was a visual programming language for AutoCAD developed in 1990 by a team of software developers led by John Kilroy and Don Shor. Their first version of AutoCAD was named Autocad. It was a command-line based "true" programming language where the designer made objects using commands. Autodesk Inventor, a drawing and vector modeling software, was first released as a 32-bit plug-in for AutoCAD in 1985. 1990s Autodesk Revit was introduced in 1999. It was the first licensed 3D design product available for AutoCAD, and was aimed at the architectural and construction industry. Revit allowed designers to create a model of a building in three dimensions in Revit. The system was based on objects that could be manipulated as a whole, so that a design could be built up as a modular structure, rather than doing it one part at a time. Autodesk is currently developing a competitor to the dominant CAD software, AutoCAD, called AutoCAD 2020. Autodesk's investment in AutoCAD Microstation, a next generation (Everett, Massachusetts) 3D product on the Windows platform, was announced on April 15, 1996. The product was intended to provide a low-cost 3D modeling solution for small-scale users. The product was to be based on the platform and GUI of AutoCAD, but was to be hosted and distributed on an independent platform. The product was to be released in the third quarter of 1997. 2000s 2010s Other computer-aided design applications Balsamiq – A web-based wireframe/mockup tool for Mac OS X. A 4-year-old girl, born with atrial septal defect, was readmitted for treatment of status epilepticus. She had been taking methylprednisolone sodium succinate for seizures since birth. Two days after stopping therapy, she began to vomit and was admitted to hospital. There she developed respiratory failure and was put on positive pressure ventilation. She was treated with methylprednisolone sodium succinate 1 mg/kg intravenously, but when this was discontinued, she became apnoeic, and over the next 8 h developed cardiac arrest, recurrent apnoeas and bradycardia. The child died. The family denied any suspicion of excessive glucocorticoid intake in the previous few days. All four of her younger siblings were administered methylprednisolone sodium succinate at doses corresponding to their body weight and no deaths were observed. In conclusion, although home care of the patient included the practice of giving a single dose of medication orally, this did not necessarily mean that she had received the prescribed dose and was therefore at risk of under-dosage.
