The user-interface of AutoCAD has three main windows. The main drawing window is used for creating and editing drawings, the drawing template window is used for creating drawing templates and settings, and the drawing status window is used for displaying drawing status information. The right side of the drawing window shows the current tool and the selected input point/line/arc/circle. Clicking a tool or selected

---

point/line/arc/circle brings up the appropriate toolbox, which contains options to perform various tasks. The toolbox is divided into three main areas, which are often referred to as the "Stick", "Pen", and "Brush" toolboxes. Clicking on a tool or selected point/line/arc/circle in the toolbox activates the tool and places it in the toolbox. Once a tool is activated, it cannot be deactivated. The selected point/line/arc/circle is replaced with the tool, and the tool remains in the toolbox until it is removed by the

user or the tool is moved to the default tool, the default tool is one that's always automatically selected. Each tool that is not the default tool is given a unique color that serves as a visual indication that the tool is in use. The left side of the drawing window includes a three-dimensional (3D) Modeling workspace, the drawing area, and the three-dimensional Drafting workspace. The 3D Modeling workspace contains three tabs: the Properties tab, the Modeling toolbar, and the Model toolbar. The

---

Properties tab displays information about the model, such as the current settings and values of dimensions and dimensions constraints. The Modeling toolbar provides shortcuts to common modeling operations. The Model toolbar provides shortcuts to common modeling operations. The toolbars can be moved to any location within the drawing window, but do not automatically move to their new position when a new toolbar is added. When the drawing window is full, the toolbars cannot be

---

expanded or reduced. The Modeling toolbar is the most heavily used toolbar; it contains tools that are used frequently throughout the drafting process. The Model toolbar is not as frequently used as the Modeling toolbar, but it is still a very useful tool. The drawing area, or model canvas, is the area where drawings are created. A drawing can be created in any of the drawing templates or from scratch. A drawing can be started by simply clicking the drawing canvas; however, a drawing can be started

Struggling to find a new place to live? West Oakland rents are surging. As San Francisco real

---

estate prices have reached record levels, it's no surprise that city dwellers are flocking to the west side of the bay for a fix. For some, the ideal West Oakland residence has a funky-quirky vibe and is a short bus ride from all the amenities of the city. But there are fewer housing choices than there were a few years ago, and the median rent of \$3,500-plus is increasingly out of reach for many who want to live there. "If you do a number of Google searches and take a look at the housing in West Oakland,

---

there's a lot of stuff, and it's pretty crappy," said Harold Davis, an artist and organizer who has lived in the area for about 30 years. "I'd be willing to pay a few hundred bucks a month more for a place with some character. And yet the places I'd like to live don't have character." Now there are signs that a rent squeeze is starting to appear: residents are complaining about high rents, landlords are demanding rent hikes and the city is pushing the development of one of Oakland's largest residential projects. The

---

2,000-unit, five-building UC Terrace project by developer Richardson is part of a shift that has seen the number of affordable housing units dwindle as rising rents have left developers looking for other options, said Ken Adam, a senior policy analyst at the San Francisco Planning and Urban Research Association. In the past, affordable housing projects were more common in West Oakland, he said, but they are no longer.

"Renters are being squeezed between high rents and nonexistent,

---

nonexistent or inadequate supply," said Ruth Milkman, a UC Berkeley professor who has been researching the relationship between rent and housing for years. Real estate agent Christina Taylor, the founder of West Oakland-based Realty Plus, said she has noticed a more intense competition among landlords in recent months as the market has become "hoardier." "It's been a good market, and all of a sudden
