To understand the details of all the new features in AutoCAD 2023, you'll need to watch the presentation. However, there are several enhancements that we'd like to highlight. First of all, we're excited to announce that we are partnering with Lumenra to incorporate their 3D Modelling tool L3D into AutoCAD. If you're familiar with AutoLISP or you've ever used their 3D free modeling tool (to draw models in AutoCAD, you'll find this integration to be an extremely convenient way to model your designs. Once you've drawn your model and exported it as an AutoCAD 3D file, you can import that file directly into AutoCAD and your model will automatically appear. You can even save any changes made to your model as a new revision in AutoCAD's history. You'll be able to view, modify, and edit your models directly in AutoCAD without leaving L3D. To demonstrate how this integration works, EdxCo has been working with Lumenra on a project called the Innovative Business Alliance (IBA). As you'll see in the video, we're able to create our models in L3D and immediately view them in AutoCAD. We can make changes and save the model directly in AutoCAD without leaving L3D. Here are some more details about the IBA project: You can find details about this project here:
