Microsoft has decided to create its own Windows Vista Icon Pack, for which it has made available an installer. In fact, the new icon set is designed to fit with the new Windows Vista Operating System, and will be made available to all users of this operating system starting today. A minimalistic collection of icons, the current version of Vista icon set has 96 icons in total and has appeared in the mainstream operating systems such as Windows Vista. The brand new icon pack is quite large and contains a lot of different items. What you can use to create some nice things with Visual Basic: for example, you can add a picture to a form using the PictureBox. The examples that are given to the data of the PictureBox can be used as an icon, e.g. pictures of the programs. An example of how to use this would be something like, in the example, from the picture of the user with a keyboard, or a picture of an application, the operating system, or in the Control Panel. In the example, we make a button and a picture. What you can use to create some nice things with Visual Basic: for example, you can add a picture to a form using the PictureBox. But I am confused with the meaning of the '*' in pointer dereferencing. If I write it as '*', does it mean I want to use the value of first element of array to be dereferenced? I am using Visual Studio 2015 and I have set the compatibility option of "Use of ANSI C" to "Yes". char* buffer = "test"; buffer[4] = 'l'; I expect the output to be t1s1t but it is not what I expect. I have been reading this: But it does not explain my question. A: An array name is a
