Alienzye is an easy-to-use tool that will help you to protect your software. The program comes in handy in case you are worried about your software being modified or cracked. Alienzye is created with the purpose of making your software "uncrackable" and "unhackable". The tool checks if your software is protected against modification by detecting if a debugger is

present or if virtualization is running. Alienyze performs a thorough integrity check of the app. And if the integrity check is positive, the app will start. If any suspicious activity is detected, Alienyze will display an error message and stop the execution. Alienyze is not a file compressor. It will not compress your files.

Alienyze is able to protect your application in real time. Therefore, the application can stop working before it actually

is hacked. In case the integrity check is positive, Alienyze will load your app and protect it. The program is not limited to desktop applications. It supports embedded applications as well. Alienyze is a very simple program, but the program is very effective. It takes a few seconds to install. The program runs on Windows XP, Windows Vista, Windows 7, and Windows 8.

This is a Free to try version.
