EXPrint

Solves a printing problem. ExPrint component enables user to print a component without having to know where exactly in the component a control is. With ExPrint component the user can specify the location of a control in the print preview window. And then click the print button and the controls appear at that location on the printout. ExPrint Adding the ExPrint component to a form can be done in several ways: · From the Toolbox. · By dragging and dropping the ExPrint component onto a form and then selecting Print on the Control menu. · By placing an ExPrint component on the form, then making sure you have selected the Control Source property of the control and have selected the file that will be used for printing. This is the easiest way to add the component. If you are placing the component on a form and have not added the Control Source property then you must place the component in a form with a control with the Print property set to True. Then you must add the Control Source property to the control and set the control source to the correct print file. The following example shows the adding of the component to a form. 1. Add the ExPrint component to the form. 2. From the control menu select the control on the form. Then, under the Properties tab, select the Control Source property. 3. Select the correct print file. 4. Click OK. Example: 1. Add the ExPrint component to the form. 2. Drag and drop the component on the form. 3. On the form there are two buttons: Start and Stop. 4. Click Start. 5. Click the form button of a button component. 6. Click Print on the control menu. 7. A printing window opens. The print preview is for the component with the ExPrint component selected. If you have a control and it has the Print property set to true, then this property is set automatically by the ExPrint component when it is added to a form with a control. Some components might not support the printing of controls by setting the Control Source property. In this case you must change the Control Source property to the correct print file when adding the component to the form. Key Features: · Add controls to a print preview window · Control Source property for controls · Automatic print preview of controls when the form is started · Control Source property for controls · Printing on-screen and to printer · Option for scrolling a

What's New in the?
