'KEYMACRO' is a command that allows to insert a string to be used in a simple macro. Usage: 'KEYMACRO STRING'
Syntax: KEYMACRO STRING Description: You may specify the macro content by defining a string that consists of any number of characters. You can also specify a file, a drive, or a directory, in which case the content of that file, drive, or directory will be inserted to the macro. The syntax allows you to define a special user-defined constant: 'KEYMACRO {NAME}' '{NAME}' is a name that has been defined using "TEXT". The name has to be valid under DOS, Mac OS, Linux, and Unix; in addition, it can be used inside the macro and, if it contains a space, also outside it. You may specify multiple user-defined constants: 'KEYMACRO {NAME1} {NAME2}' The names specified in the macro may be used anywhere in the program. You may also specify: 'KEYMACRO {(FULL)/FILE}' Any text you put after the keyword, 'KEYMACRO', will be inserted to the file as a single line. You may specify: 'KEYMACRO {FILE}' Any text you put after the keyword, 'KEYMACRO', will be inserted to the file as a single line. Example: MACRO 1 'KEYMACRO "First line."' MACRO 2 'KEYMACRO "Second line."' MACRO 3 'KEYMACRO {(FULL)/FILE}' 'KEYMACRO "File content."' X11-Basic Crack + For PC

X11-Basic is a dynamic dialect of Basic, which is closely related to the English language. The dialect works by interpreting the textual information that is provided by the user, and it then compiles this into executable programs. While it supports all the commands of Basic, X11-Basic also goes beyond that by offering a range of specialised features that ensure it can be used effectively for a number of applications. As far as syntax is concerned, the dialect is characterised by the following features: • Use of upper case and lower case letters • Support for concatenation • No statement in the form of while ()-loop • No implicit keywords in most cases • No statement in the form of do-while • Higher level structures with declaration • Rightwards declaration • Direct declaration • Dynamic declaration • Not required to be declared • And many others
