User Guide ROUTE 66 Sync is a tool that can keep the content of your GPS navigation device up to date, ensuring that you have the latest maps available for use. In order to function properly, it requires you to connect the device to the computer via a USB cable. Its compatibility range includes ROUTE 66 Mini and Maxi products, Nokia 6110 mobile phones, as well as any other handset with ROUTE 66 Mobile app installed. The application automatically detects all the connected devices, enabling you to easily select the model and the corresponding navigation software edition. You can explore the contents stored on your handset, which are neatly organized into specific categories. ROUTE 66 Sync can display a list of all the maps your device is equipped with, while also enabling you to view information about the traffic and the weather forecast. You can view installed GPS guidance voices, manage color schemes for the available maps and access travel guides. All data can be easily backed up to the local computer and restored at a later time. The on-screen 3D map can be of assistance in planning routes, setting waypoints, saving routes to your computer and then transferring them to the GPS. Its search options allow you to easily find important objectives and places or view points of interest (attractions, auto services, eating and accomodation, shopping, tourist info and so on). Also, you can configure it to avoid motorways, toll roads and ferries when generating routes, as well as adjust speed for each means of transport. ROUTE 66 Sync can download updated maps to your computer, providing you with a simple and fast way to transfer them to the navigation device. It can be used for planning routes, saving and printing maps with ease.
