It was a breakthrough in CAD because it enabled users to draw directly on a computer screen. As CAD continued to evolve, and CAD operators kept needing to create and manipulate large files in real-time, Cadran realized that creating new, smaller versions of CAD would offer greater user efficiency and, therefore, greater competitive advantage. So they started developing a brand new CAD application, a lightweight, scalable, and more cost-effective CAD tool. That application was AutoCAD, which was introduced in December 1982.
