Host Status Monitor Crack+ Serial Number Full Torrent

Host Status Monitor is a small software application whose purpose is to help you automatically monitor the status of multiple hosts. It works with all sorts of hosts and port combinations, such as SSH, Telnet, DNS, SMTP, HTTP, HTTPS, IMAP, and POP3. The utility can be deployed on all Windows versions out there. Portable running mode You can store Host Status Monitor on pen drives or other portable devices and carry it with you all the time. You do not have to follow the steps included in an installation process because you can access the program's functions by double-clicking on the executable file. You may get rid of it with a deletion task because it does not leave entries in the Windows registry. Straightforward looks Host Status Monitor reveals a clean and simple layout that hides only a few configuration settings under the hood. A help manual is not included in the package. However, you can quickly get an idea about how to set up the dedicated parameters because they look easy to work with. Host monitoring capabilities The program offers you the possibility to check out information about each host, like name, hostname/IP address, port number, and status. What's more, you are allowed to set up a new host by providing information about the name, hostname, and port number. In addition, you can edit or delete hosts. Other important configuration parameters worth being mentioned enable you to automatically refresh the information displayed in the main window at a certain number of seconds, specify the timeout in seconds, show balloon notifications, as well as make use of multi-threading actions. Tests have shown that Host Status Monitor carries out a task quickly and refreshes the information without errors. It is not a resource hog so you do not have to worry that it hampers the overall performance of the system. You may keep it running the background. Final thoughts The bottom line is that Host Status Monitor offers a straightforward software solution for helping you keep an eye on multiple hosts at the same time, and can be configured by rookies and professionals alike. 1. Description: Host Status Monitor is a small software application whose purpose is to help you automatically monitor the status of multiple hosts. It works with all sorts of hosts and port combinations, such as SSH, Telnet, DNS, SMTP, HTTP, HTTPS, IMAP, and POP3. The utility can be deployed on all Windows versions out there.
