Although cryopreservation improves the viability of heart valves and has allowed for the use of these valves as a replacement for the aortic root, little has been published in the literature to document its use. We have used

cryopreserved homografts for aortic root replacement in 13 patients. The patients were seven women and six men, with an average age of 40.7 +/- 12.2 (SEM) years. The aortic valve was not replaced in any of the patients and 10 were considered to be in New York Heart Association class II or III. Associated procedures included mitral valve replacement in two,
