

What can you expect with HyperMotion Technology? New, dynamic attacking styles Control the ball more easily with new off-the-ball movement and improved passing Smarter, reactive AI Fully connected play Every move, touch, pass and shot is now connected to everyone on the pitch New Ball Physics One of the most-anticipated additions to FIFA has to be the “ball physics,” a term used to describe how the ball reacts to play and doesn’t behave the same as it did in the previous versions of the game. How Ball Physics Works The ball physics are now tuned to match the strengths of the players in FIFA 22, the new ball touch is as responsive as in real-life. Goalkeepers will be awarded a penalty kick if they are directly behind the ball. New players to the series have made dynamic sprints more rewarding and the new “bias when being tackled” option adjusts player character animation according to the circumstances they are in, creating more realistic collisions and better player behaviour. On-Pitch Intelligence FIFA has always had some of the most intelligent, reactive and player-focused AI in the video game industry. This year, that intelligence has been upgraded with the addition of “On-Pitch Intelligence”, an AI engine that captures player positioning, movement, positioning, on-pitch actions and more. Each individual player on the pitch will now have their own individual intelligence levels. And when the ball touches them or they come into contact with other players, they will react to this, adapting their decisions accordingly. This makes players more reactive than ever before, creating a more dynamic match. We’ve moved the ball towards the players and given it more intelligence so that it understands the game, adapting to situation. Players will now react and adapt to situations, and have access to information such as the position of the ball and player’s upcoming touches, in order to make smarter decisions. Unleash your creativity with the brand-new Create-a-Player mode It takes a lot of creativity to be a star in this football world. In FUT, that creativity is harnessed through the “Create a Player” mode. Players can make a play of their own design, including adding the ball to their foot when close to it. They can create a

The FIFA franchise is the world's most popular sports video game franchise, developed by EA Sports under the direction of EA Canada. Named by TIME as one of the world's greatest video games, FIFA is known for its immersive realism and authentic gameplay, and is one of the most played sports video games in the world. Who is Brian Ching? Brian Ching is a retired American professional soccer player who is currently an executive consultant for FIFA. During his playing career, Ching won the MLS Cup in 1998 and was named the Major League Soccer MVP in 2001, while also earning numerous accolades and awards during his four-year career with the Miami Fusion. How will you impact the game? For FIFA 22, EA Sports and the worldwide team have built on the momentum of FIFA 19 to deliver an unprecedented gameplay experience that delivers even more of what we all love about FIFA; realism, customization, gameplay and sport. What have you learned from FIFA 19? We learned that people love to download FIFA and get involved, and that we can do that in really fun ways. We've focused on providing more ways for players to actively engage with the game, and incorporate innovation into gameplay where we can, creating an exciting experience for players to be involved with FIFA 22. What have you learned from other EA SPORTS games? Building on the strength of our flagship football titles, we're taking FIFA into new and growing markets. FIFA is a great game, but football, especially in North America, is only part of the story when it comes to the way we play, socialize and connect with each other. That's what we learned when we launched the most successful FIFA esports competition in the world, and we're learning even more as we work with our partners and fans to further take this element of FIFA to new heights. What challenges did you face? We faced a lot of challenges when developing FIFA, not just to satisfy players, but to also expand our userbase. We wanted to create the best version of FIFA ever. What are some of the major gameplay advancements of FIFA 22? The final step in the evolution of the FIFA franchise has come with a focus on player individuality, the diversity of online experiences and social play, all presented with the new physics engine that raises the bar for immersive player likeness, expression, animation, and movement across every game mode
