Player movement is more responsive and the ball feels more alive on the pitch. Artificial intelligence has also been improved to be more reactive and to make smarter decisions. Below are screenshots of the enhanced gameplay from Daniel “Walcy” Walczak, a technical programmer at EA Sports on FIFA 22. Read the Q&A below to hear about the gameplay changes in more detail. How will movement feel when using the ‘Motion’ gameplay setting in FIFA 22 on the Xbox One and PlayStation 4? Walcy: First off, we wanted to make sure that everyone has an accurate movement representation in FIFA, and along with that came the trusty feedback we got back from the community about the ball-feel, especially in corner kicks. The ball feels very different when you have the new anti-Dribble on and need to pass it in a tight area. The new ‘Motion’ gameplay settings work really well, but there is still a little while to go before you are playing FIFA with this enabled. The other setting we tried was FIFA motion. It’s a lot better, but it is still not perfect. We introduced an improved ball/player accuracy depending on the player’s speed (which causes things to be more frenetic when moving fast and a calm, more calculated game when moving slow). We also tried something like ‘Impact Physics’ which is mostly a game-mechanics setting. We tried several of these different gameplay settings but the best one was ‘Auto’ which we found to be the smoothest and most realistic player movement. And right now this is our preferred gameplay setting. How will playing without the ‘Motion’ gameplay setting change the gameplay? Walcy: The new ‘Motion’ gameplay settings are great for getting a feel for the game’s new features in action, but once you are done with that we have provided three other gameplay settings that can help make you more comfortable in the game. For example, it is hard to simulate a tight pass when you are off the pitch, so by moving the ball to one of the different (part of pitch) slots, it will allow you to make the passes more accurately. This is especially useful for keeping the ball away from goal, even when a player has run away from the opponent. It’s like a pass to the back post. The other setting is ‘Impact Physics’ (that
