Manage cookie settings We spoke to the man behind the technology, FIFA gameplay engine director Ian Ashbee, who told us about the game's new features, discussed the technology powering the game and how it's changed over the years. What was the foundation of HyperMotion Technology? Microsoft's Kinect came out in 2010, which opened the door for us to bring that technology to FIFA. We had been developing things for the new consoles but that was the first time that we were able to integrate it. Once we were able to do that, we discovered there were a few things we could do to improve certain things about how we represented football. We had always been able to use player animations and turn them on and off, so that when you were editing them it was easy for you to see all the different animations of a player running. When we made the jump to Kinect, we found there were a couple of things that were difficult for us to animate. One of them was movement, where you see the player turn and then you have to turn it on again. The other part was on-ball or off-ball actions. So, for example, if the player makes a pass, you can turn that off. But what if a team-mate tackles the player and wants to have him tagged before he can break away? If you turn off-ball actions that player would break away, but you don't want that - you have to keep it enabled for the player. So we needed a way to activate those animations in a more intelligent way, to allow you to activate and deactivate them quickly. Xbox One has the same hardware as PS4, but the FIFA engine runs on the Xbox One X with no dedicated hardware for motion tracking. How were these challenges taken into account for Fifa 22 Product Key? We had some challenges with the Xbox One that we were always striving for more than the other machines. One of them was the way the camera works. We tried to use the camera to see where the players were in the room and hopefully make it a good place to play. The other thing was that we needed our animations to be smooth - they had a lot of layers, and we used a lot of full-body animations. So we decided to do something that would help with the latter. We

What's new:

- **Galvanise Rush: Run to the flank with speed and acceleration, then cross with a first touch for a long-range finish, or burst down the middle for a devastating cross.**
- **Radial Pass: Hone your timed and acrobatic passing skills with the new radial passing mechanic. Take more risks and showcase your flair on the ball as you drift in from midfield and move to the final third.**
- **Fast-Paced 3 v 3: Be the Best: Test your skills against the best players in the world from around the world when EA SPORTS FIFA 20 launched in June. Play 1 v 1, 2 v 2, or choose between 4v4 or 5v5 modes.**
- **Mobile Cross: Celebrate your dynamic style on-pitch like never before with the all-new mobile cross mechanic. Shift into a shooting position, ready to crush shots from outside the area in the blink of an eye.**
- **Liverpool Enhanced: FIFA 20 revealed the newest kits in the England club's history in March, and today we're pulling back the curtain on the ones for Liverpool, built for FS. Editor's notes: We omitted the famous "Reds" script, Froud effect, gold strips and script: EA Canada team was the proud custodians of the game's livery last year. Last but not least: the new one pairs red with royal blue plaid.**
- **Goalkeeper Freekick: Keep the keeper busy with an all-new freekick with increased range, from narrow to long. Make them move their body in radical ways, or don't even bother and go and hammer 'em from nearly half-way.**
