This must be changed for new repositories. . . . . 0 = best out there.. There is another newer version. . . . . .

Gmail is currently blocking my account and I dont understand why. In regards to this problem Im guessing Im not the only one having this issue. Just want to make sure. A: I guess an IPv6 DNS server is your issue. Google's DNS servers are located at 8.8.8.8 and 8.8.4.4 and both are IPv4 servers. If Gmail can't handle IPv6, it's not really their responsibility to use the new protocol, they just need to add support. Here are some Google's answers with the same issue: Dotyrosauroides Dotyrosauroides is an extinct genus of

ankylosaurian dinosaur known from the Middle Triassic-age Upper Muschelkalk of Germany. Discovery Dotyrosauroides was named by Hans von Koenigswald, as a senior curator at the Institut für Geowissenschaften in Heidelberg. The generic name means "the Old Spanish Taser" and the specific name honours the paleontologist of the Heidelberg institute, Josef Beutel. The holotype was found in 1972 at the Gottfried-von-Freund-Höhle near Tübingen, southwest Germany. The genus is based on the part of a putative series of six to nine individuals, in which individual may have been further composed of several parts. Description Dotyrosauroides was a large ankylosaurid, like many others, as can be judged by the genus name and its fossils. Its body was in length, about half as large as that of its

relative, Orodromeus. It has been suggested that the type specimen is actually an individual of the genus Orodromeus. If that is the case, it would represent the first occurrence of an ankylosaur with a small head. The head is approximately in length. The forelimbs are large with four long fingers. The hindlimbs are shorter than the forelimbs. Classification In a 1984 publication, von Koenig
