\* The fine folks at Paint.NET are some of the best trainers there are for free software. They have quick-start videos that show, step by step, how to use all of their programs, including Paint.NET, Photoshop Express, and GIMP, their free Linux-based cousin of Photoshop. (GIMP is discussed in Chapter 11.) All of their tutorials are free — and the videos are available in both simple and expert modes. \* As a free alternative to Photoshop, consider GIMP. It also uses a layer-based editing system, but its user interface is a bit more straightforward to use. For details, see Chapter 11. \* For tutorials that'll teach you the basics of Photoshop, check out Tuts+'s tutorial section. \* Lynda.com is a commercial source for many video tutorials. Its public tutorials are reasonably priced and can be downloaded in standard formats. It offers valuable training on graphics software, including Photoshop, and other software applications.

Making the following list only to highlight what you can do in Photoshop Elements is pointless, so we're going to actually focus on the strengths of the app. The list below contains only the most commonly used software applications for Photoshop users. If you like it, you might also like the following list of apps which perform exactly the same functions as Photoshop but are easier to use: What is Photoshop Elements? The official website of Adobe Photoshop Elements states that the app is "a photo and graphics editing application for personal use." The description of the app is pretty much accurate: the app lacks a lot of the advanced functionality that Photoshop has. Its interface is very similar to the one in Photoshop Lightroom, and the app performs tasks very similar to those that Lightroom handles. Adobe Photoshop Elements works for Mac OS and Windows and is available in the App Store and the Google Play Store. The Windows version is available as a Universal app but works only on Windows 10. It's also available on Android. The Mac version is available as a disk image or as a standalone app, with access to only one website (Adobe.com) and a single photo library. A typically confident David Haynes, head of the UK Automotive Fuel Systems Sector, in 2019, is a far cry from the anxious times his young family faced in the early 1990s. Don't get him wrong - Haynes never lost sight of business's need for health and safety in the workplace, but the situation was different in 1992. "With children and the number of hours we worked, we were just worn out," recalls Haynes. "Fuel systems are very important, but they're not rocket science." His point is reinforced when the UK Automotive Fuel Systems Sector, the NEDA equivalent to the TSSA's Fuel Safety Board, voluntarily increases its overall fuel system safety to the highest level in the world. This means manufacturers in the UK will be subject to a tougher set of performance standards for leakage from pipe joints, brazing, fuel lines and pipes, fittings and valves, transmission tubes and steering boxes, as well as a new requirement to specify components with a greater possible leakage rate. In addition, FSSC is testing all new components as part of its assurance activities for three years - better known as TAP (Trial After Production). Haynes also points out that in 1992 he represented a sector that was very dependent on a just-in-time supply chain. "By then, the fuel system suppliers, including our own petroleum product supply companies, were all just reliant on the manufacturers and the manufacturers were also very reliant on the suppliers. There was a lot of trust in each other, yet it all changed pretty quickly." In the old days, he recalls, there were "five or six" HSE offices with a handful of staff. Today the companies and their HSE managers spend "most of our time in court". "We [now] spend more on these activities than the Government spent on all the fuel safety improvements in the last 25 years." The new tougher-than-ever regulations - eventually scheduled to be phased in from the start of 2020 - will cost £63 million
