2006 was a tough year for the die-hard Aggies fans. The team went 3-9 overall and 1-6 in the Big XII. They picked up a couple of wins against their closest rivals (K-State and Texas A&M), but lost more than they won, defeating UH, Baylor, and OU. They were crushed by OU in Dallas, lost at home to Boise State, and got beaten by Baylor. The 2004 season was a high note for the Aggies. The team finished 5-6 and, for the first time in the history of the program, made the Cotton Bowl. They won four of their last five games, including a come-from-behind win against OU in the Big XII Championship Game. Although the other Aggies programs didn't fare as well, they were all on an upswing. The conference was doing well, with K-State and UTSA improving and Texas A&M really coming into it's own. So what does this have to do with The Big XII Championship Game? Over the last couple of years, the Big XII has been getting a reputation for being a top-heavy conference. OU was the king for a good chunk of the 2000's, but they've been challenged and even beaten by their Big XII rivals and by a couple of non-BCS teams (Nevada and Boise State). In 2005, the TCU Horned Frogs were a Cinderella story. The media were calling them the Next Big Things, and I was fully buying in to the hype. It was the same for the 2006 squad as well, although they probably only had the "Next" part of the hype, because they were playing A&M, and A&M was, well, one of the most consistent teams in the conference. The difference between the two seasons, however, is that TCU almost pulled off a 9-0 season, and they did come close to beating A&M. Even though the A&M team wasn't as good as they were in either of the seasons in question, they were good enough to compete. However, the Horned Frogs were barely good enough for their own conference. This is the major difference between the two seasons. At the time, there was a lot of speculation that the Big XII might add an automatic qualifier to the conference title game. Maybe they would drop to the BCS with a 6-6, conference record and let the automatic qualifier(s) advance.

A case of cerebral oedema complicating dengue haemorrhagic fever. Dengue infection can be associated with several complications, including progressive haemorrhagic manifestation. In our patient, a 12-year-old male, it was associated with cerebral oedema. This complication is probably under-reported in the literature, and its usual symptoms are non-specific. The pathophysiology is probably related to the cytokines produced by dengue virus and to the sequel of vascular permeability. The indication for treatment is based on the patient's clinical status. %@", JASidePanel.class.getName()); if (!prev.equals(panel)) { sidebar.remove(panel); if (JASidePanel.DEBUG) { System.out.println("JASidePanel.removeSideBarView(): " + JASidePanel.class.getName()); if (height!= JASidePanel.DEFAULT_HEIGHT) { System.out.println(" - height = " + height); } } } } } Q: What is Arrange / Table / Columns In Python, I have line of code which are translated from VB.Net code arrange / table / columns What does it mean?
