References Category:American video game designers Category:Living people Category:Year of birth missing (living people)Optimism and well-being in patients with rheumatoid arthritis: What are the mechanisms? The aim of this study was to elucidate mechanisms by which optimism influences well-being in patients with rheumatoid arthritis. A sample of rheumatoid arthritis patients (N = 265; mean age [SD] = 61 [13.4] years, 55.9% women) completed questionnaires at baseline, including the scale of the nowicki-Szekun and the Endicott well-being index and measures of rheumatoid arthritis disease status, pain, sleep disturbance, depression, fatigue, health-related quality of life, and psychological acceptance of rheumatoid arthritis. From the participants, we obtained information about their current use of sleep medication and previous use of psychiatric medication. The majority of the sample was currently satisfied with their life and did not use medication for sleep. Optimism was positively correlated with self-rated well-being, psychological acceptance of rheumatoid arthritis, and better physical and mental health. Optimism was negatively correlated with sleep disturbance and positively correlated with perceived health. Linear regression models indicated that optimism was an independent predictor of physical and mental well-being, psychological acceptance, and sleep disturbance, even after controlling for disease

---

status, previous medication use, physical and mental health, fatigue, and depression. These findings indicated that optimism, independent of disease status, improved physical and mental well-being, psychological acceptance, and sleep and that these improvements were mediated by perceived health. These results may be helpful for enhancing and maintaining well-being in patients with rheumatoid arthritis. Are e-cigarettes better than regular cigarettes? Are e-cigarettes a way to quit smoking? The mechanism of a cigarette is to relax the brain, meaning it lowers the feeling of stress and increases the appetite for food. Smoking a cigarette also increases serotonin levels in the body, leading to increased happiness and relaxation, which is the reason that cigarettes are the most widely used and addictive substance in the world. E-cigarettes are a modern replacement of cigarettes. They work by delivering nicotine into the body through electronic vapor, which produces a noticeable chemical aroma and nicotine vapour that feels like breathing in cigarette smoke. E-cigarettes use battery power, and unlike traditional cigarettes, there is no smoke produced from the device. E-cigarettes are
