It's Episode 6. And as the last episode, it's kind of a fun one. A little bit of geek humor. You're gonna hear what's basically a parody of a recent episode from the Star Trek: TOS series. It's when Kirk and Spock discover an alien planet and they start to become friends and then learn a lot about one another, and it's it's kind of a big plot point in the show. And Kirk and Spock have a "Tongue-Ins." And that's basically a scene where one of the characters introduces himself and starts talking about his life and his past, and then it sort of leads into a conversation between the two of them. So a fun little scene, really. And it's essentially a parody. So most of the jokes are jokes that people have made in the last four years. We try to keep it humorous, but it's also to give a final toast to our last episode. We want you to know d0c515b9f4

These proteins are difficult to study in a biological system because of their low abundance and toxicity. The low abundance of these proteins limits the biochemical methods of their analysis and the preparation of pure samples of outer membrane proteins (OMPs) for structural and biophysical studies. The long term goal of this research is to develop a method for producing large quantities of these integral membrane proteins in a functional form so that they can be analyzed structurally and biochemically. The specific aim of this proposal is to use protein engineering techniques to produce heterogeneous assemblies that contain a single OMP and to examine the biological and biochemical features of these assemblies. Proteins produced this way will be much easier to purify. The simplicity of assembly of multiple, heterogeneous OMPs will also allow the screening of combinatorial libraries with random mutations in the OMPs and the identification of important portions of the proteins. The proposed approach is based on the interaction of the bacterial gene for OMPs with the gene for an Escherichia coli intron and the accessory proteins of the prophage Lambda. The intron/Lambda system provides a method for the insertion of a non-host gene for an OMP into a bacterium. The target genes are designed to integrate into the same locus as the intron/Lambda accessory genes. The accessory genes cause the intron and OMP gene products to form a heterogeneous assembly. The accessory proteins are designed to be encoded by a gene for a phage coat protein, P22, and will be screened for their ability to assemble the OMP and the coat proteins. The P22 coat protein coats the exonuclease which is excised from the Lambda mRNA, thus linking the OMP and coat protein to the vector DNA. The completed particle will have 4 coat proteins and one OMP. Assessing the taxonomy of the Lepidoptera: new name, origin and range for the genus Pseud

Manufacture of polymeric microspheres by a double emulsion and solvent evaporation technique. The use of the double emulsion-solvent evaporation technique for the preparation of polymeric microspheres is described. The technique gives an opportunity for the incorporation of various drugs either in the middle or outer phase, or in both of them, by changing the selected polymer properties. The microspheres, prepared by this technique, are single, free flowing granules or they may be shaped as bar, plate or tube. The method is versatile, relatively simple and it allows a production of microspheres with a wide variety of shapes and sizes.Q: Loading in of rich text edit (RTE) from database in.NET I'm in the process of writing a small webapp that involves editing some wikitext in RTE. I need to get the data from a database (essentially, a table of formatted text) but I'm not sure how to do this in.NET. I only have a basic understanding of XML and html, and there doesn't seem to be any way of getting a RTE into XML. Any ideas would be appreciated. A: You could always have it on the db, but that's a bit of a pain in the neck. This is a better way: class editor { public string data; } class cfg { public ArrayList editors; public cfg() { editors = new ArrayList(); } public editor geteditor(int id) { editor e = (editor) editors.get(id);
