Transport Stream Packet Editor allows for the analysis and correction of demuxed videos for further editing and processing into final files. Jogo do Vasco di Gama Jogo do Vasco da Gama nasceu já no período colonialista, quando Portugal entrou em contato com a cultura grega e estudou suas técnicas de guerra, que incluíam o jogo de castigo e eliminação de inimigos. Então, depois de retirada da Índia, a segunda contribuição que Portugal fazia foi a das ordens militares que organizava um combate aos índios que rivalizavam com seu, tendo o jogo como uma das formas de represália. E foi então, que o Vasco da Gama teve início nessa maneira, fazendo parte desde então um dos jogos mais populares do Brasil. Destinado para circular na escola e na praça, é um jogo de corpo a corpo, de eliminação de muitos inimigos e que geralmente leva entre 6 e 8 minutos de jogada. It does a very good job at removing errors. I think it is the best tool for this job. John Chirgwin Thank you very much! Awesome tool! I have to use this to edit ts files, but I had a problem that this tool lacks. Claudio Easy to use. Easy to use. You can use this editor for your video streams and get a good quality. I could not see any other editor that did the job so well. SignyQ: How to debug ASP.NET code from a C# program? I have a project written in C# which uses an ASP.NET page as a back-end. I have a C# program that I'd like to debug the ASP.NET page from. That's a bit of a struggle. So, the question is: How can I get the C# program to load the ASP.NET page? Can I write code in the web application's code-behind (.cs) file and have the debugger break in the page's code? I've tried it, and it only seems to break in the Page's "Load" event handler. I don't want to debug the code because I'm not working on the program right now. I need to load the page before any of the event handlers fire. A: Yes, you can simply write some code in the page code behind and that code will be executed when the page loads. The debugger should break in that code. Beyond that, you're probably going to have to tweak the web.config file to enable debugging so that you can see the results in your browser. Q: 2 dimensional columnar database system I'm looking for a way to store a range of rows (approximately 2 million) where each row consists of a single binary value (0 or 1) and that data is organized into an array of columns like so: (Here, each of the X's represent a
