Voltage Calculator is a web-based application that calculates the voltage in your home based on the current wattage used. Enter the wattage of any household appliance. Select the resistance (Ω) in the first drop-down list. Select the RMS rating in the second drop-down list. Press the "Calculate voltage" button. The RMS output values are available in red and you can print the values to a text file or directly to any MS-Excel or MS-PowerPoint spreadsheet. Once you have selected the resistance and RMS values, the program will calculate the voltage based on your input values. The output values can also be copied into Microsoft Excel for further analysis. The web-version of the application allows you to calculate the voltage in any location that has an internet connection. You can use the program on your desktop computer or even a notebook computer with an access to the internet. The software is free and we support the development with a lot of programming. What is the website address to use the software's back-end interface: `?home/user/task` (where the username and password is "admin") Note: The RMS values can only be entered through the web-interface and you can only download the application for a limited time. Once you have used the application and calculated all your voltage values, your download quota will be exhausted and the application will be no longer available.
