Save time and effort and get back access to your lost or forgotten password, with DataNumen Sharepoint Password Recovery To start with, you can load the files that need to be decrypted into this utility, selecting them through the system, right click and dragging them into the program or, alternatively, directly adding them manually. Press the 'Start Recovery' button to get the job done, as it loads the files and displays the results. A useful SharePoint recovery solution at your disposal Afterward, you can simply click on the 'Settings' button that appears on the top toolbar to control your settings and get things under your control. The following settings can be easily modified by means of the Options window: *The amount of time that the software will wait for a response before displaying the results. *The size of the file, which is not being encrypted, in terms of KB or MB, that should be left. *The location in which the results are to be saved, when the PST is saved to a different location from where it was loaded. *A name for the recovered files. You can also choose between two different modes, namely – simple mode, which will only display the decrypted password and the decryption process time, whereas the normal mode will also include a detailed report containing the decrypted file names, PST file size, and creation and last accessed times. Furthermore, you can also choose a language, so that it appears in the same, according to your settings. A practical SharePoint recovery solution at your disposal The system can support both open and closed SharePoint online sites, letting you go straight to their settings. After the decryption process is completed, a popup window will appear and show you the decrypted file names. Furthermore, you can also check the file size, creation and last accessed times through the report. DataNumen
