The effect of iron supplementation on hemoglobin content in term infants. To determine the effect of iron supplementation on the hemoglobin content of formula-fed infants we randomized sixty-two term infants to receive either a commercially available human milk-based formula supplemented with 30 mg of iron daily (n = 36) or a human milk-based formula (n = 26) without iron supplementation (controls). Hemoglobin levels were measured at 12, 24, 48, 72, and 120 h. The two groups were well matched for age, birth weight, and length of time on formula. At 120 h hemoglobin levels were similar in both groups. However, the iron supplemented group had higher hemoglobin levels than the control group at 24 and 48 h (P less than 0.05). We conclude that iron supplementation at a dosage of 30 mg daily during the first 2 months of life leads to a higher hemoglobin level in formula-fed, term infants. Q: proto3 issue: protocol buffer has no message body; skipping After I have updated my protobuf code in go to v2.0.0-alpha2, I got error says protocol buffer has no message body; skipping: utf8.ProtoPackageUid(...) And this error only shows up when I update to protobuf to v2.0.0-alpha2. I don't know how to find the cause of this error. From error log, I have found that the issue may due to changed code base or some migration issue. Can anyone give any hint to see whether it is my new code base or not? Thanks A: I have found the reason of this error. The mistake was that the label of a repeated field is not valid in protobuf. More info can be found here: Why aren't messages required to have a default value for a repeated field? Q: How to add custom view with custom animation to the constraint layout? I want to add a custom view with animation to the constraint layout. But for some reason it doesn't work. It worked only with TextView. ConstraintLayout constraintLayout = (ConstraintLayout) findViewById(R.id.vhc_layout); ConstraintLayout.LayoutParams lp = new ConstraintLayout.LayoutParams(ViewGroup

Q: How to make this code add up properly I am adding up a set of numbers using if statements. However when I'm testing it, it's always either giving the sum of all numbers or the sum of an individual number, but never a sum of both. Can someone tell me what I'm doing wrong? int x; float sum = 0.0; float sum2 = 0.0; cout > x; cout
