Roblox is a community that connects players through roleplaying games. Here, players program their own games by creating a virtual world called a sandbox. Unlike other sandbox environments, Roblox grants players freedom to make their own rules and explore how their game will play out when its graphical engine is run. The experience in the Sandbox becomes persistent when played by multiple players, and the community events are often based on the game's plot. Roblox is a game platform that allows users to play online multiplayer games using computers or smartphones. Users create their own game using a programming language, such as JavaScript, Python, or Lua, and connect players through the server. Players can find games that match their interests or they can create their own free of charge. The software is designed to enhance the gaming experience by boosting player skills, rewarding achievements, and allowing for the sharing of game play among multiple players. More than 300,000 developers have created more than 100 million games on Roblox. Many of these games have gained notoriety and recognition, winning notable awards and becoming bestsellers. Roblox now has more than 164 million monthly active users, including more than half of all children younger than 16. Early days The founders of Roblox began programming their first game in 1996, and released it in 1999. Named "The Blackhole," it was the first game to combine 3D graphics with an online multiplayer game. The creators of The Blackhole, Kristofer Tilton, Robert Tilton, and David Baszucki, now create games as Roblox Studio, the third most popular game developer of all time, after Activision and Electronic Arts. While Roblox has seen continued success over the years, the company is just as famous for its missteps as it is for its accomplishments. The success of the company came at a price, however, as Roblox struggled with piracy, copyright infringements, and the looming specter of lawsuits from Sony. That experience helped inspire game design that would become the cornerstone of Roblox Studio's success later on. Roblox Platform Roblox is an online game platform, licensed under Apache 2.0. It was initially released in 2006 as a game creation system, and was later rebranded to reflect its true purpose. Roblox enables users to create games using the programming language Lua. The bad vibe at Facebook has some employees wondering if the social networking company is so obsessed with growing its user base - well over 1.5 billion - that it is sinking other important priorities. "There are some teams that aren't working. People have left for Microsoft, Salesforce, Facebook," one person familiar with the workings of the company said on Wednesday, on condition of anonymity. Microsoft this week hired over 500 new engineers to work on Windows Azure and Office 365 for the company, known to its employees as "Windows and Office." A Facebook spokeswoman said the company did not respond to rumors about staff turnover. The company has laid off more than 1,000 workers this year and more than 2,000 in the past five years. FACEBOOK COULD BE BIGGEST PHONE DEALER Google Inc was an obvious target for mobile developers looking for more efficient ways to access the hundreds of thousands of apps that can be accessed via smartphones, and Facebook was among the companies vying for a piece of that money-making pie. Industry sources suggested earlier that Facebook was launching its own smartphone, although the company has had no comment on the matter. One source said Facebook was trying to convince app developers to develop apps for its phone, and another said it might buy the patents of one such company, which could amount to billions of dollars for the company. "If Microsoft can get the non-working apps people into the Microsoft App store... it's going to be a win for Microsoft and I think a loss for Facebook," one source said. Facebook is trying to persuade developers who have been working on apps that don't make money to switch their apps to Facebook.

I did a repair table and it works like it's supposed to, except in one case. In the database I have a table named files. I query this table like so. SELECT * FROM files WHERE tablename="directory" AND date = 25-06-2012; The query works perfectly. However, if I do a SELECT * FROM files WHERE tablename="directory" AND date = 25-06-2012; in the mysql terminal, nothing happens. I run the same query in Navicat and it's there. Could it have something to do with mysql being Windows/Cli? A: Try to quote string like: SELECT * FROM files WHERE tablename = 'directory' AND date = '25-06-2012'; Because you don't need quotes around date variable in query.
