===== There are many different types of games on Roblox, but most are within three main categories: * Social - games that can be played by one person at a time. * Creative - games that can be created by the player on their PC or mobile device. * Competitive - games with controller-based multiplayer action. Roblox currently has three creative programming languages: * Lua - the primary language that is used to create games. * Javascript - an Adobe Flash-based scripting language. * ActionScript - Adobe's Flash-based programming language. Roblox runs in four different operating systems on PC, mobile, console, or VR: Windows, macOS, Android, and iOS. Each system offers different sets of functionality, especially with respect to Creative and Development tools. To program games, users can choose between a Lua- or ActionScript-based language. Lua-based programming tools are free and open-source. The platform also features virtual currency, Robux, which can be purchased within games to help players unlock in-game items, characters, and premium servers. Robux can be purchased in 1:1, 1:2, 1:5, and 1:10 ratio purchases with real-world money. A Roblox user can make games and share them with friends on a social network that Roblox calls "Find Friends". Users may also make groups that allow community interaction. Groups can invite members from outside of the group to join. Groups can use moderated chatboxes to communicate to their members. Roblox can keep a record of who and how often each user communicates with other users. Users can join more than one group at a time. When a user joins Roblox, they are given 10 Robux to start playing with. They are then able to earn more Robux for sending friends invites, being online, or winning games. Another resource for earning Robux is to purchase with real-world money. Roblox was initially created for the development of educational games for children. Educational games have a structure and atmosphere that is created for children. Games should also give children opportunities to learn things while playing. Examples of educational games include Roblox's virtual world, where you can explore different geographical locations. You may run into a dinosaur, a fire truck, or a police car. When you meet a person they will be able to chat with you. If you drive a car, you may
